**Subject:** FW: TAP plugin

Hi,

We are big fans of TAP plugins – thanks a lot for great piece of code!

We just upgraded TAP plugin from 20 to 22 and Jenkins from 611 to 615 and it fails on TAP now:

```
10:53:11 TAP Reports Processing: START
10:53:11 Looking for TAP results report in workspace using pattern: **/*.tap
10:53:11 Saving reports...
10:53:11 Processing '/var/lib/jenkins/jobs/gh-mellanox-v1.8-PR/builds/137/tap-master-files/cov_stat.1
10:53:11 Parsing TAP test result [/var/lib/jenkins/jobs/gh-mellanox-v1.8-PR/builds/137/tap-master-fi
10:53:11 There are failed test cases and the job is configured to mark the build as failure. Marking
10:53:11 TAP Reports Processing: FINISH
10:53:11
```

**Build step 'Publish TAP Results' changed build result to FAILURE**

The cov\_stat.tap has this:

```
#cat /var/lib/jenkins/jobs/gh-mellanox-v1.8-PR/builds/137/tap-master-files/cov_stat.tap
not ok - coverity detected 1411 failures in all # SKIP
ok - coverity found no issues for oshmem
ok - coverity found no issues for yalla
ok - coverity found no issues for mxm
ok - coverity found no issues for fca
ok - coverity found no issues for hcoll
```

and the project configured with TAP like that:

## ☰ Publish TAP Results

Test results

- Verbose (if checked will print a message for each TAP stream file)
- Fail the build if no test results are present
- Failed tests mark build as failure
- Output TAP to console
- Enable subtests
- Discard old reports
- TODO directive fails a test
- Include comment diagnostics (#) in the results table
- Validate number of tests
- Is TAP plan required?

It seems that TAP plugin or newer jenkins (615, we used 611 before upgrade that all worked fine) – the TAP fails on # SKIP tag.

When we disable TAP plugin – all works fine and passes.
